## Ringdale® Introduces LightSpace Manager Mobile App for Apple Devices

*Now Control ActiveLED Lighting Fixtures Anywhere You Are*

GEORGETOWN, Texas—February 2, 2015—[Ringdale®](#), Inc., Texas-based manufacturer of USA-made [ActiveLED® luminaries](#), today introduced the LightSpace® mobile application for the iPhone®, iPad®, or iPad® Tablet. The LightSpace mobile app provides convenient control over the lighting in a building space, especially frequently used space. LightSpace eases an office or facility manager's role in managing, controlling, and reporting on an area's lighting. With a click of a button on their desktop, tablet, or iPhone, companies can conserve energy, save money, and reduce their carbon footprint.

“Tablets and smartphones have allowed professionals to have more freedom from their desks while remaining productive. The LightSpace mobile application extends the ability to conveniently access controls at any hour and from anywhere an individual may be,” remarked Klaus Bollmann, president of Ringdale, Inc. “We designed the mobile application so that office professionals can continue to manage energy efficiency and productive illumination levels even after they have left the building.”

The LightSpace mobile application is an extension of the LightSpace Building Automation and Energy Management smart technology that controls a building's light space and energy usage. ActiveLED lighting with LightSpace tailors an environment for increased energy savings through the ability to directly or remotely control, connect, and manage the building or individual zones. LightSpace allows organizations to enforce rules throughout their enterprise often realizing additional savings of 25% or more on energy while providing the right light levels during all shifts to individual or whole areas. Available in a variety of platforms, LightSpace can transform typical lighting controls into a fully integrated system suited for one room or for a multi-level building complex.

The LightSpace Manager app is available as a free download from Ringdale to LightSpace customers. With the app, users can access manual control or set up scenes for different rooms. Each room can have multiple presets, allowing the user to set the light level for that scene as well as the mode (auto, on, or off). High-use applications include meeting or shared space rooms, board rooms, auditoriums, sporting facilities, or personal office space.

ActiveLED has over 200 commercial-grade luminaries for interior and exterior applications available directly from Ringdale or its network of resellers. For more information, visit the company online at [www.Ringdale.com/LightSpace](http://www.Ringdale.com/LightSpace).
